

South East Electricity Substation Alliance

24th November 2009

To Whom It May Concern,

RE: GREEN PILING LTD

Over the last 12 months, I have had the opportunity to both work with and observe Green Piling Ltd who have been the piling sub-contractor on a major project for the construction of a new electricity supply sub-station and associated infrastructure works at Tilbury Power Station, Tilbury – Essex.

To date there have been a total 1018 number pre-cast concrete piles installed to depths of 27m, 94 number steel tubular piles raking at 1 in 4 to depths of 28m and 102 steel tubular piles beneath 400kVa power lines to depths of 24m.

Within my role as Site Manager I have responsibility for all the construction operations on site and have had no issues regarding their approach to both safety and performance on site.

When works have had to be accelerated to accommodate programme, they have without complaint supplied adequate resources to maintain and accelerate the works to meet with our programme requirements.

I would recommend Green Piling Ltd to any prospective client, based upon the high level of quality and service we at Tilbury Power station have received to date.

Yours sincerely

Nick Walsh
Site Manager
